How are they different?</p>                                                                     |                                                                                                                                                                                                                                                                                                                                                   |                         |
| <p><b>Q:</b> Do you think there are more fractions between <math>\frac{1}{2}</math> and <math>\frac{1}{3}</math> or between <math>\frac{1}{3}</math> and <math>\frac{1}{4}</math>? Explain your reasons.</p> |                                                                                                                                                                                                                                                                                                                                                   |                         |

|                         |                                                                                                                                                                                                                                                                                            |                   |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>B1.4</b> (continued) | <b>Q:</b> Place the following numbers on a number line. Tell how you decided where they should go on the number line.                                                                                                                                                                      | Number • Page 77  |
|                         | <b>Q:</b> Choose three different improper fractions. Add 3 to each numerator and 3 to each denominator. Is the new fraction greater than or less than the original, or is it equal to the original? Why does what happened after you added 3 to each numerator and denominator make sense? |                   |
|                         | <b>Q:</b> Suppose the numerator of a fraction is 9 more than the denominator. Which of the following statements could be true? • The fraction is greater than 2. ...                                                                                                                       |                   |
|                         | <b>Q:</b> Is there a single digit that you can place in all of the following statements to make them true? Are there others? Explain.                                                                                                                                                      | Number • Page 78  |
|                         | <b>Q:</b> A fraction is just a little greater than $1\frac{3}{4}$ . What might the fraction be? How do you know?                                                                                                                                                                           | Number • Page 79  |
|                         | <b>Q:</b> You are going to compare two mixed numbers: $X\frac{a}{b}$ and $X\frac{c}{d}$ . What information is the most important in order to decide which number is greater?                                                                                                               |                   |
|                         | <b>Q:</b> List three improper fractions with different denominators that are easy to put in order. Explain why it is easy to put them in order.                                                                                                                                            |                   |
|                         | <b>Q:</b> Is it easier for you to compare two improper fractions or two mixed numbers? Why?                                                                                                                                                                                                |                   |
|                         | <b>Q:</b> Use a diagram to show a mixed number and what its improper fraction equivalent is.                                                                                                                                                                                               | Number • Page 127 |

|                                                                                                                                                                                                                  |                                                                                                                                                                                                             |                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>B1.5</b> read, represent, compare, and order decimal numbers up to hundredths, in various contexts                                                                                                            | <b>Q:</b> You are counting by hundredths starting at 5.28. What words will you hear a lot when you count the first 30 numbers? Which words won't you hear as much when you count the first 30 numbers? Why? | Number • Page 80 |

|                                                                                                                                                                                                  | <b>Q:</b> For each statement, find numbers where the hundredths digit is 4 more than the tenths digit and makes the statement true: a) The decimal is less than 4.28 ...                                                                                                     |                  |
|                                                                                                                                                                                                  | <b>Q:</b> Which digit in 3.28 matters most when you are comparing it to another decimal in order to decide which decimal is greater?                                                                                                                                         |                  |
|                                                                                                                                                                                                  | <b>Q:</b> Choose three numbers between 10 and 12 with decimal hundredths. Two of them should be very close together but have different tenths digits. The third decimal number should be less than the other two. Order them from least to greatest.                         |                  |
|                                                                                                                                                                                                  | <b>Q:</b> You read an amount of money, and some of the words you say are twenty, cents, five, dollars, and fifty. What amount might use these words?                                                                                                                         | Number • Page 93 |
|                                                                                                                                                                                                  | <b>Q:</b> Write down four amounts of money that include dollars and cents. Use each of the ten digits at least once. Include at least one amount greater than \$100. Write down the words you would say to describe each amount. Repeat two or more ways.                    | Number • Page 94 |
| <b>B1.6</b> round decimal numbers to the nearest tenth, in various contexts                                                                                                                      | <b>Q:</b> A person's height is estimated as 1.6 m. How many metres might the actual height be?                                                                                                                                                                               | Number • Page 83 |
|                                                                                                                                                                                                  | <b>Q:</b> Is there a single digit that you can place in all of the s that makes all these statements true? Are there other digits that would make all these statements true?                                                                                                 | Number • Page 85 |
|                                                                                                                                                                                                  | <b>Q:</b> Describe a number of the form X that you would round up to round to the nearest tenth, but round down to round to the nearest whole number.                                                                                                                        | Number • Page 86 |
| <b>B1.7</b> describe relationships and show equivalences among fractions, decimal numbers up to hundredths, and whole number percents, using appropriate tools and drawings, in various contexts | <b>Q:</b> It is easy to write the decimal X as a fraction. What might the decimal be?                                                                                                                                                                                        | Number • Page 80 |
|                                                                                                                                                                                                  | <b>Q:</b> Choose three fractions you can show as decimal hundredths. Use materials to show how the decimals and fractions are equal. Then, choose three fractions that you can't show as decimal hundredths. Explain why you can't show the fractions as decimal hundredths. | Number • Page 82 |
|                                                                                                                                                                                                  | <b>Q:</b> Draw several pictures that would help someone see why $0.1 = 0.10$ .                                                                                                                                                                                               | Number • Page 84 |

## B2. Operations

**Overall Expectation:** By the end of Grade 5, students will: use knowledge of numbers and operations to solve mathematical problems encountered in everyday life

### Properties and Relationships

|                                                                                                                                                                                                                                  |                                                                                                                                                                                                              |                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| <b>B2.1</b> use the properties of operations, and the relationships between operations, to solve problems involving whole numbers and decimal numbers, including those requiring more than one operation, and check calculations | <b>Q.</b> Two whole numbers are as easy to add and subtract mentally as they are to multiply. What might they be?                                                                                            | Number • Page 90  |
|                                                                                                                                                                                                                                  | <b>Q.</b> I multiplied a number by 7 in my head by multiplying it by a slightly larger number and taking some away. What number might I have multiplied by 7?                                                | Number • Page 92  |
|                                                                                                                                                                                                                                  | <b>Q.</b> Why might it be easier for someone to multiply $4 \times 26$ in her head than $3 \times 78$ ?                                                                                                      |                   |
|                                                                                                                                                                                                                                  | <b>Q.</b> When do you find it easy to subtract two numbers greater than 50 in your head? Why?                                                                                                                |                   |
|                                                                                                                                                                                                                                  | <b>Q.</b> A bus holds 48 students. Would you figure out how many students are on four buses the same way you'd figure out how many students are on nine buses if you were calculating in your head? Explain. |                   |
|                                                                                                                                                                                                                                  | <b>Q.</b> How could knowing that $2.14 - 0.85 = 1.29$ help you solve other decimal subtraction questions?                                                                                                    | Number • Page 96  |
|                                                                                                                                                                                                                                  | <b>Q.</b> To add two decimals in her head, Ava subtracted 0.2 from one of the numbers and added 0.2 to the other number. What might the question have been? Why can she do that?                             |                   |
|                                                                                                                                                                                                                                  | <b>Q.</b> Fletcher said that to subtract two decimals, you can ignore the decimal points, subtract the numbers, and then put the decimal point back. Do you agree or disagree? Explain.                      |                   |
|                                                                                                                                                                                                                                  | <b>Q.</b> You solve a problem involving multiplication of two two-digit numbers, and the product is about 300. What might the problem have been?                                                             | Number • Page 96  |

Patterns and Relationships</b>                                                                                                                                                              |                                                                                                                                                                                                                                                                        |                            |
| <b>Overall Expectation:</b> By the end of Grade 5, students will identify, describe, extend, create, and make predictions about a variety of patterns, including those found in real-life contexts |                                                                                                                                                                                                                                                                        |                            |
| <b>Patterns</b>                                                                                                                                                                                    |                                                                                                                                                                                                                                                                        |                            |
| <b>C1.1</b> identify and describe repeating, growing, and shrinking patterns, including patterns found in real-life contexts                                                                       | <b>Q:</b> Find a repeating pattern based on translations somewhere around you.                                                                                                                                                                                         | MPA • Page 72              |
|                                                                                                                                                                                                    | <b>Q:</b> What clues would you use to decide whether a pattern is a repeating translation pattern?                                                                                                                                                                     | MPA • Page 75              |
| <b>C1.2</b> create and translate growing and shrinking patterns using various representations, including tables of values and graphs                                                               | <b>Q:</b> Make a geometric pattern using a different number of square tiles for each term. Describe your pattern.                                                                                                                                                      | MPA • Page 72              |
|                                                                                                                                                                                                    | <b>Q:</b> Create a number pattern that grows very slowly.                                                                                                                                                                                                              |                            |
|                                                                                                                                                                                                    | <b>Q:</b> Create four increasing number patterns. Make one of the patterns increase by 7. Increase each pattern by a different number. Include the number 120 in all of the patterns. Describe which term is 120 in each pattern.                                      | MPA • Page 73              |
|                                                                                                                                                                                                    | <b>Q:</b> The 20th term in a shrinking pattern is in the 500s and the 30th term is in the 300s. What might the pattern be? How do you know you are right?                                                                                                              |                            |
|                                                                                                                                                                                                    | <b>Q:</b> Create a geometric growing pattern that uses exactly 50 shapes in the first 5 terms.                                                                                                                                                                         |                            |
|                                                                                                                                                                                                    | <b>Q:</b> Create a geometric growing pattern that uses 26 shapes in the sixth term. How many shapes are used in the first 11 terms? Explain.                                                                                                                           | MPA • Page 74              |
|                                                                                                                                                                                                    | <b>Q:</b> Create a repeating translation pattern where the distance moved to the right is much greater than the distance moved up or down. Then, create a repeating translation pattern where the distance moved to the right is triple the distance moved up or down. |                            |
|                                                                                                                                                                                                    | <b>Q:</b> You predict that the 20th term of a growing number pattern is close to 600, but it is not exactly 600. What could the pattern be? Think of two or three possibilities. Explain how you created each pattern.                                                 |                            |

|                         |                                                                                                                                                                                                               |               |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>C1.2</b> (continued) | <b>Q:</b> The 30th term in a growing number pattern is the same as the 15th term in another growing number pattern. What could the two patterns be?                                                           | MPA • Page 74 |
|                         | <b>Q:</b> Create a pattern that is more like the pattern 200, 197, 194, 191, ... than it is like the pattern 147, 145, 143, 141, ... . Explain why your pattern is more like the first pattern.               | MPA • Page 75 |
|                         | <b>Q:</b> Create a growing number pattern and a shrinking number pattern that have the same 20th term. Explain how you know they have the same 20th term.                                                     |               |
|                         | <b>Q:</b> You can see the top part of the tiles in a pattern, but you can't see all of the tiles. What could a related number pattern be? Explain your thinking.                                              | MPA • Page 76 |
|                         | <b>Q:</b> The second term in a pattern is 2 and the third term is 4. Create a table of values for the first 10 terms.                                                                                         | MPA • Page 77 |
|                         | <b>Q:</b> Create a number pattern that increases by 3. Then, show two ways to model the pattern. Which model do you think makes it easier to see the increase of 3? Why?                                      | MPA • Page 78 |
|                         | <b>Q:</b> Create a table of values for a pattern based on multiplying each term by the same number to get the next term. Model the first four terms of the pattern.                                           |               |
|                         | <b>Q:</b> The third term of a growing pattern is 10. Create the first six rows of a table of values to represent a possible pattern. Model the first four terms of the pattern with square tiles or counters. |               |
|                         | <b>Q:</b> Create a shrinking pattern with square tiles. Use a table of values to describe the number of tiles used for each figure in the pattern.                                                            | MPA • Page 79 |
|                         | <b>Q:</b> Create a growing pattern that includes the number 20. Show the pattern in a table of values. Then, model the pattern to make it obvious that it's a pattern. Explain why this is obvious.           |               |

|                                                                                                                                                                                                      |                                                                                                                                                                                                               |                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>C1.3</b> determine pattern rules and use them to extend patterns, make and justify predictions, and identify missing elements in repeating, growing, and shrinking patterns                       | <b>Q:</b> What numbers might go in the blanks? Why? Think of more than one possibility.                                                                                                                       | <a href="#">MPA • Page 72</a> |
|                                                                                                                                                                                                      | <b>Q:</b> Describe two number patterns where you think it's easy to predict the 20th term. Explain why you think it's easy.                                                                                   | <a href="#">MPA • Page 75</a> |
|                                                                                                                                                                                                      | <b>Q:</b> The 10th term in a growing number pattern is 38. The 50th term is more than 100. What do you predict about the 100th term? Why?                                                                     |                               |
|                                                                                                                                                                                                      | <b>Q:</b> Can you predict the 50th term value in this pattern? Are you sure?                                                                                                                                  | <a href="#">MPA • Page 76</a> |

What might the data set look like? Tell how you know that you're right.</p> |                        |

## D2. Probability

**Overall Expectation:** By the end of Grade 5, students will describe the likelihood that events will happen, and use that information to make predictions

|                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                          |                 |

| <b>D2.1</b> use fractions to express the probability of events happening, represent this probability on a probability line, and use it to make predictions and informed decisions                                                                                                                | <b>Q:</b> How can you describe this image by using numbers?                                                                                                                                                                                                                                                              | GSSDP • Page 76 |
|                                                                                                                                                                                                                                                                                                  | <b>Q:</b> How might you show the probability of winning at rock, paper, scissors to someone who doesn't know how to play?                                                                                                                                                                                                |                 |
|                                                                                                                                                                                                                                                                                                  | <b>Q:</b> What is something that occurs about $\frac{1}{4}$ of the time? What is something that occurs about $\frac{1}{2}$ of the time?                                                                                                                                                                                  |                 |
|                                                                                                                                                                                                                                                                                                  | <b>Q:</b> You have to choose between four flavours of ice cream that you like equally. How might you design a way to help you decide which one to have?                                                                                                                                                                  | GSSDP • Page 77 |
|                                                                                                                                                                                                                                                                                                  | <b>Q:</b> There are three to six possible outcomes to an experiment. What might the experiment be? List all the possible outcomes. Then, represent the possible outcomes by using a shape that is divided into a number of equal parts that is the same as the experiment's number of possible outcomes.                 |                 |
|                                                                                                                                                                                                                                                                                                  | <b>Q:</b> You use two different fractions to describe the possible outcomes of a probability experiment. What might the experiment be? Tell what fractions you used. Then, conduct your experiment 12 times, and collect the results. Use a fraction tower to help you tell whether the outcomes match your predictions. |                 |
|                                                                                                                                                                                                                                                                                                  | <b>Q:</b> A bag has 12 socks in it. Draw 12 very different socks to show what the bag's contents might look like. Use fractions to tell the chance of three things that could happen if you pulled out a sock from the bag.                                                                                              | GSSDP • Page 78 |
| <b>Q:</b> Choose one of the following: coin(s) spinner(s) playing cards number cube(s) Conduct a probability experiment for your choice, and record the results. Using the same number of outcomes and the same number of test rounds as your first experiment, repeat for another choice above. |                                                                                                                                                                                                                                                                                                                          |                 |

|                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                      |                  |

| <b>E1.4</b> plot and read coordinates in the first quadrant of a Cartesian plane using various scales, and describe the translations that move a point from one coordinate to another | <b>Q:</b> Two points are close together on a Cartesian coordinate plane. Two other points are far apart. What might the coordinates of the points be? Tell why your answers make sense.                                                                                                                                                                                       | GSSDP • Page 96 |
|                                                                                                                                                                                       | <b>Q:</b> How does using a coordinate system make it easy to find objects on a map or grid?                                                                                                                                                                                                                                                                                   | GSSDP • Page 96 |
| <b>E1.5</b> describe and perform translations, reflections, and rotations up to 180° on a grid, and predict the results of these transformations                                      | <b>Q:</b> Pick image A, B, or C, and tell how the pattern block might have gotten from its first location to its second location.                                                                                                                                                                                                                                             | GSSDP • Page 53 |
|                                                                                                                                                                                       | <b>Q:</b> You look at two or three different designs made out of pattern blocks. It's hard for you to tell if one half of the design was created from a translation of the other half or if one half is instead a reflection of the other half. What might the designs look like? Show how each design might have been created by using either a reflection or a translation. | GSSDP • Page 55 |
|                                                                                                                                                                                       | <b>Q:</b> Using triangle dot paper, show and explain why sometimes you can't know for sure how a shape has been moved from one place to another unless you are told how this was done.                                                                                                                                                                                        | GSSDP • Page 58 |
|                                                                                                                                                                                       | <b>Q:</b> How might the square have moved from position A to position B?                                                                                                                                                                                                                                                                                                      | GSSDP • Page 97 |
|                                                                                                                                                                                       | <b>Q:</b> Make three designs out of square tiles. One should show a reflection, one should show a rotation, and one should show a translation.                                                                                                                                                                                                                                |                 |
|                                                                                                                                                                                       | <b>Q:</b> Sketch a regular pentagon, hexagon, or octagon. Then, trace your shape using tracing paper. Next, rotate your shape differently to see how else it could look. Then, repeat with an irregular version of the same shape. Tell what you notice each time.                                                                                                            |                 |

|                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                  |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| E1.5 (continued) | <p><b>Q:</b> Draw an irregular polygon. Then, choose a point of rotation inside your shape, and mark a dot there. Trace your shape using tracing paper. With your tracing aligned on top of your original shape, poke a hole through both shapes with a pencil where you see the point of rotation. While keeping your pencil and your original shape in place, show what your polygon would look like if you rotated it 90° clockwise, 90° counter-clockwise, and 180°. Then, repeat these steps for a point of rotation outside your shape.</p> | GSSDP • Page 98  |
|                  | <p><b>Q:</b> A pattern on centimetre grid paper shows a rotation and a reflection. What might the pattern look like?</p>                                                                                                                                                                                                                                                                                                                                                                                                                          | GSSDP • Page 99  |
|                  | <p><b>Q:</b> Thinking about everyday situations, when would you use a 90° rotation? When would you use a 180° rotation?</p>                                                                                                                                                                                                                                                                                                                                                                                                                       |                  |
|                  | <p><b>Q:</b> Imagine that two different shapes have been transformed in the same way. For one shape, it is easy to know how it was transformed. For the other shape, it is not easy to know how it was transformed. Explain how this might be possible.</p>                                                                                                                                                                                                                                                                                       |                  |
|                  | <p><b>Q:</b> The shape below was transformed from quadrant 1 into quadrant 2, from quadrant 2 into quadrant 3, and then from quadrant 3 into quadrant 4. How might the shape have been transformed each time for it to look like this in quadrant 4:</p>                                                                                                                                                                                                                                                                                          | GSSDP • Page 131 |
|                  | <p><b>Q:</b> The same transformation is described in two different ways. Tell how this is possible. Give an example to show that your answer makes sense.</p>                                                                                                                                                                                                                                                                                                                                                                                     | GSSDP • Page 134 |
|                  | <p><b>Q:</b> Tell a strategy for performing reflections and a strategy for performing rotations. Then, explain how the two strategies are similar and how they are different.</p>                                                                                                                                                                                                                                                                                                                                                                 |                  |
|                  | <p><b>Q:</b> How might you know that a shape has been rotated?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | GSSDP • Page 177 |

## Grades 4–8 • Open Questions for the Three-Part Lesson: *Measurement • Patterning & Algebra* [MPA]

| <b>E2. Measurement</b>                                                                                                             |                                                                                                                                                                                                                                                                                  |                               |

Give the mass using two different units.                                                                                                                                                         | <a href="#">MPA • Page 122</a>    |
|                                                                                                                                                      | <b>Q:</b> Draw a picture to show why you multiply a number of centimetres by 10 to figure out the number of millimetres that describes the same length.                                                                                          |                                   |
|                                                                                                                                                      | <b>Q:</b> You have 1.24 L of orange juice and a little less apple juice. How many millilitres of apple juice might there be?                                                                                                                     |                                   |
|                                                                                                                                                      | <b>Q:</b> Measure the area of your school gym in square metres. Then, describe the area in square centimetres. Which measurement do you think is a better description? Why?                                                                      | <a href="#">MPA • Page 123</a>    |
|                                                                                                                                                      | <b>Q:</b> Describe the capacity of something that people would not consider very large. Then, describe it using different units so that it sounds big.                                                                                           |                                   |
|                                                                                                                                                      | <b>Q:</b> What units might go in the blanks to make this statement true? Use two different pairs of units.                                                                                                                                       | <a href="#">MPA • Page 124</a>    |
|                                                                                                                                                      | <b>Q:</b> Choose a decimal number of kilograms. Rename that mass as a number of grams.                                                                                                                                                           |                                   |
|                                                                                                                                                      | <b>Q:</b> What numbers might go in the blanks to make this statement true? The first number is a decimal and both numbers are greater than 100. L = mL.                                                                                          |                                   |
|                                                                                                                                                      | <b>Q:</b> Why might you describe a measurement in thousands of square centimetres rather than square metres?                                                                                                                                     |                                   |

|                                |                                                                                                                                                                                                                                                                                                                         |                                       |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
|                                | <p><b>Q:</b> Use a picture or model to show why you multiply a number of square metres by 10 000 to figure out the number of square centimetres that would describe the same area.</p>                                                                                                                                  | <p><a href="#">MPA • Page 152</a></p> |
| <p><b>E2.2</b> (continued)</p> | <p><b>Q:</b> You multiply a measurement by one million to write it using a different unit. What might the original unit and the new unit be?</p>                                                                                                                                                                        | <p><a href="#">MPA • Page 154</a></p> |
|                                | <p><b>Q:</b> You know how <sup>[1]</sup><sub>[SEP]</sub> to describe square metres in terms of square millimetres <sup>[1]</sup><sub>[SEP]</sub> Is it easier to use that information to describe square metres in terms of square centimetres or to describe square kilometres in terms of square metres? Explain.</p> |                                       |

**Grades 4–8 • Open Questions for the Three-Part Lesson:  
Geometry and Spatial Sense • Data Management and Probability [GSSDP]**

| Angles                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                          |                  |
|------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>E2.3</b> compare angles and determine their relative size by matching them and by measuring them using appropriate non-standard units | <b>Q:</b> Draw an angle. Then, draw an angle that is about half as big as the first angle. Then, draw an angle that is about twice as big as the first angle.                                                                                                                                                                            | GSSDP • Page 10  |
|                                                                                                                                          | <b>Q:</b> Two angles from a triangle pattern block can be combined to create the same angle as an angle on a trapezoid pattern block: What other two identical angles from a pattern block can you combine to create an angle on another pattern block?                                                                                  |                  |
|                                                                                                                                          | <b>Q:</b> Draw a right angle and half a right angle by using a tool to make them the correct size. Then, draw two or three other angles. Estimate the number of degrees of each of these angles by using only your right angle and your half a right angle as tools.                                                                     | GSSDP • Page 11  |

|                                                                                                                                          | <b>Q:</b> Use geostrips to make three or four different polygons. The angles within each polygon should be equal.                                                                                                                                                                                                                        |                  |
|                                                                                                                                          | <b>Q:</b> One of these shapes is different from the others because of something to do with angles. Which shape do you think it is? Why?                                                                                                                                                                                                  |                  |
|                                                                                                                                          | <b>Q:</b> On a geoboard, make an angle that you know the name of. Then, make an angle that you don't know the name of.                                                                                                                                                                                                                   |                  |
|                                                                                                                                          | <b>Q:</b> Aaliyah says that a 2-D shape with sides that are all the same length has angles that are all the same size. Do you agree with this idea? Explain your answer.                                                                                                                                                                 | GSSDP • Page 46  |
|                                                                                                                                          | <b>Q:</b> Sketch a triangle with just one angle greater than a right angle. Then, sketch a triangle with no angles greater than a right angle.                                                                                                                                                                                           | GSSDP • Page 47  |
|                                                                                                                                          | <b>Q:</b> Put two or more pattern blocks together to make an irregular polygon. Decide if the angles inside your new shape are acute, right, obtuse, straight, or larger than a straight angle.                                                                                                                                          | GSSDP • Page 84  |
|                                                                                                                                          | <b>Q:</b> Make a quadrilateral and a pentagon each out of two or three pattern blocks. Trace them. Compare the angles <sup>[SEP]</sup> in your shapes with <sup>[SEP]</sup> the angles of a triangle pattern block. Tell if the angles in your shapes are bigger than, smaller than, or the same as those in the triangle pattern block. | GSSDP • Page 107 |

|                                                                                                                                                                     |                                                                                                                                                                                                                                                                                       |                         |

What do you know for sure about the value when you write the amount of money in dollars and cents?                                                |                                     |
|                                                                                                                                                                 | <b>Q:</b> You buy something and pay the clerk \$10. You get one bill and five coins back. How much might your item have cost? Think of different possibilities, and show your thinking.                            | Grades K–3 OQs<br>Number • Page 115 |
|                                                                                                                                                                 | <b>Q:</b> Twenty coins are worth about \$8. What might the coins be? Give three or more possibilities.                                                                                                             |                                     |
|                                                                                                                                                                 | <b>Q:</b> You buy three items, and your change from \$10 is \$3.15. What could each of your three items have cost? Explain your answer. Think of three or <sup>1</sup> more possibilities.                         |                                     |
|                                                                                                                                                                 | <b>Q:</b> Choose two digits to fill in the boxes: \$ <input type="text"/> <input type="text"/> 5. You can use different digits or the same digit twice. Tell three or more ways you can show that amount of money. |                                     |

| <b>Financial Management</b>                                                                                                                                                          |                                                                                   |  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|--|
| <b>F1.3</b> design sample basic budgets to manage finances for various earning and spending scenarios                                                                                | There are no Grade 5 Open Questions that meet these 2020 curriculum expectations. |  |
| <b>F1.4</b> explain the concepts of credit and debt, and describe how financial decisions may be impacted by each                                                                    |                                                                                   |  |
| <b>Consumer and Civic Awareness</b>                                                                                                                                                  |                                                                                   |  |
| <b>F1.5</b> calculate unit rates for various goods and services, and identify which rates offer the best value                                                                       | There are no Grade 5 Open Questions that meet these 2020 curriculum expectations. |  |
| <b>F1.6</b> describe the types of taxes that are collected by the different levels of government in Canada, and explain how tax revenue is used to provide services in the community |                                                                                   |  |

## Grade 5 Open Questions that now align with other grades in the Ontario 2020 Curriculum

### Grade 5 Open Questions that align with Grade 2 Expectations

|                        |                                                                                                                                               |                  |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Grade 2<br><b>F1.1</b> | Q: When might you start with four bills and three coins, trade for bills and coins of equal value, and end up with six bills and seven coins? | Number • Page 93 |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|------------------|

### Grade 5 Open Questions that align with Grade 3 Expectations

|                        |                                                                                                                                |                  |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------|------------------|
| Grade 3<br><b>B2.3</b> | Q: Choose a three-digit number and a two-digit number to subtract mentally. Then, tell how you would subtract the two numbers. | Number • Page 90 |
|                        | Q: List three pairs of two-digit or three-digit numbers that are: a) easy to add in your head ...                              | Number • Page 91 |

### Grade 5 Open Questions that align with Grade 4 Expectations

|                        |                                                                                                                                                                                                                                                     |                   |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Grade 4<br><b>B1.1</b> | Q: You use three words to write out a four-digit number on a cheque. List four or more numbers you could be writing. Then, write the numbers out in words. What do you notice about the numbers that you wrote?                                     | Number • Page 63  |
|                        | Q: You read two numbers greater than 1000 that are written in words. Everything is exactly the same when you read them except for two words. What could the numbers be? How are their standard forms alike? How are their standard forms different? | Number • Page 64  |
| Grade 4<br><b>B2.1</b> | Q: What are two ways to break up the number 228 to make it easier to divide it by 3?                                                                                                                                                                | Number • Page 101 |
|                        | Q: Can every division problem be solved by multiplication? Explain.<br>Q: How could you use an easier problem to help you figure out how many numbers you would say to get to 435 if you skip count by 5s?                                          | Number • Page 103 |
| Grade 4<br><b>B2.2</b> | Q: You multiplied two numbers in your head. The product was almost 100. What numbers might you have multiplied?                                                                                                                                     | Number • Page 90  |

|                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                              |                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| Grade 4<br><b>B2.6</b>                                                                                                                                                                                                                                               | <b>Q:</b> You divide a three-digit number by a one-digit number, and the answer is less than 100. What numbers might you have divided? What do you notice about the hundreds digit in the three-digit number and in the one-digit number you divided by?                                                                     | Number • Page 101 |
|                                                                                                                                                                                                                                                                      | <b>Q:</b> In what situation might you divide 120 by 5?                                                                                                                                                                                                                                                                       |                   |
|                                                                                                                                                                                                                                                                      | <b>Q:</b> Choose a remainder of 2, 3, or 4. Try to divide lots of three-digit numbers by one-digit numbers to get that remainder. Describe your strategy.                                                                                                                                                                    | Number • Page 102 |
|                                                                                                                                                                                                                                                                      | <b>Q:</b> You can model 150 with six base ten blocks. If you divide by 6, there is no remainder. Is it true that if you model a number with a certain number of base ten blocks, you can always divide that number by the number of blocks and there will be no remainder?                                                   |                   |
|                                                                                                                                                                                                                                                                      | <b>Q:</b> Choose an amount of money between \$300 and \$400 that a class might have raised. Choose the number of charities that the class decides to split the money equally among. Figure out how much money each charity gets. Show how to get your answer in three or more ways. Repeat with a different amount of money. |                   |
|                                                                                                                                                                                                                                                                      | <b>Q:</b> Create and solve three problems where you have to divide 144 by 2. Make the problems seem quite different.                                                                                                                                                                                                         |                   |
|                                                                                                                                                                                                                                                                      | <b>Q:</b> How can you predict how many digits will be in the answer when you divide a three-digit number by a one-digit number?                                                                                                                                                                                              | Number • Page 103 |
